

## Apply Security Group Filters and WMI Filters to the GPOs

[https://technet.microsoft.com/ru-ru/library/cc904317\(v=ws.10\).aspx](https://technet.microsoft.com/ru-ru/library/cc904317(v=ws.10).aspx)

Use this procedure to assign the WMI and security group filters that you created earlier to restrict each GPO to the computers in the membership group that are running the version of Windows for which the GPO is intended.

Membership in **Domain Admins** is the minimum required to complete this procedure.

### To assign the security group and WMI filters to your GPOs

1. Log on to your domain controller as a member of the Domain Admins group.
2. Click **Start**, and then click **Server Manager**.

The Server Manager console opens.

3. In the navigation pane, expand **Features**, expand **Group Policy Management**, expand **Forest: *your forest name***, expand **Domains**, and then expand your domain.
4. For each of the GPOs that contains settings for a different zone and version of Windows, perform the following steps:
  1. **Remove the default security group filter that allows any computer to apply the GPO. In **Security Filtering**, click **Authenticated Users**, and then click **Remove**.**
  2. Add a security group filter that permits only accounts in the membership group to apply the GPO. In **Security Filtering**, click **Add**, enter the membership group account name that you created for the zone, and then click **OK**.
  3. Add a security group filter that prevents members of an exception group from applying the GPO. Click the **Delegation** tab, click **Advanced**, click **Add**, enter the exception group account name, and then click **OK**. In the **Group or user names** list, select the group you just added, in the **Permissions for Exception Group Name** list, clear all of the **Allow** check boxes, select the **Deny** check boxes for **Read** and **Apply Group Policy**, and then click **OK**.
  4. Assign the WMI filter that limits the GPO to only computers running the specified versions of Windows. Click the **Scope** tab, and then in the **WMI Filtering** list, select the WMI filter you created earlier. In the confirmation dialog box, click **Yes**.
