

## IE 11 blocks access to "Microsoft Update" service

Using Windows Update on Windows 7 SP1, there is an option to enable "Microsoft Update" at the bottom to also update Office and other Microsoft applications:

### **SOLUTION: Turn ON MSIE 11 Compatibility View for microsoft.com**

Get updates for other Microsoft products. *Find out more.*

This opens a webpage, which in IE 10 and earlier, allows me to enable Microsoft Update.

However, IE 11 does not show the page to enable Microsoft Update but shows a useless and unrelated help message:

Use your Start menu to check for updates
