

Remove a VPN connection in Windows 7

In Windows 7 you can create VPN connections for PPTP, L2TP or SSTP. To delete a connection you cannot just right click and press delete. But it's still very simple, but a lot of people can't find where you can remove VPN connections, because it is a kind of hidden ;-).

1. First open **Network and Sharing Center**
2. Click **Change Adapter Settings** on the left side

3. Now you can see all connections and you can remove the VPN connection
